# Madom.com

Owners: Hamed Sidiqyar, Aidan Bertram, Alex Zhou and Emerson Scott

- Project Description
    - Our application will facilitate the buying of any physical film or TV show in a variety of different formats. This is comparable to a vendor marketplace like Ebay. However, the difference is in the focus on physical medium content both for the sake of collection and ownership security. Due to the nature of physical content, after purchase they will have full ownership of the content of whatever they have purchased. In the modern era, many streaming services have changed their outlook, where you subscribe to the service and get to see the shows they have. However, you never get to keep any of the things you pay for. So, our service will differ in final ownership.

- Contributions
    - Hamed: I created the search bar, filter and start up navigation bar. Made the basic user login system, where user logins and has a logout button.
    - Aidan: I was involved in the database side of things for developing this project. I created the create.sql file, insert.sql file, and implemented the add to cart feature, cart page and purchasing, and the seller page and seller functionality.

- ○ Alex: I created the login and registration system, and about half of the routes in the index file, including the authentication middleware. I also created all the test cases and deployed our project.
- ○ Emerson: I created the Home, Library, and Favorites pages, along with their respective SQL tables and GET/POST routes.
